

Summary: Daniel Johnson, Astacidea (Crayfish)

This researcher was not ToD funded.

He did communicate and collaborated with ToD researcher Zachary Loughman. He also filed for a permit with NPS to do inventory work for multiple years.

Johnson shared information of new discovery, *Fallicambarus kountzae*, Big Thicket Burrowing Crayfish, with Mona Halvorsen and Mary C. Johnston who used information and pictures for press releases.

He has authored a book on crawfish, *Crawfishes of Texas*, to be published hopefully in near future.

He may have collaborated with Dr. Larry Brown on vascular plant research in the early years of ToD as his name was seen on documents.
